Slide 2

Means to minimize CAPEX

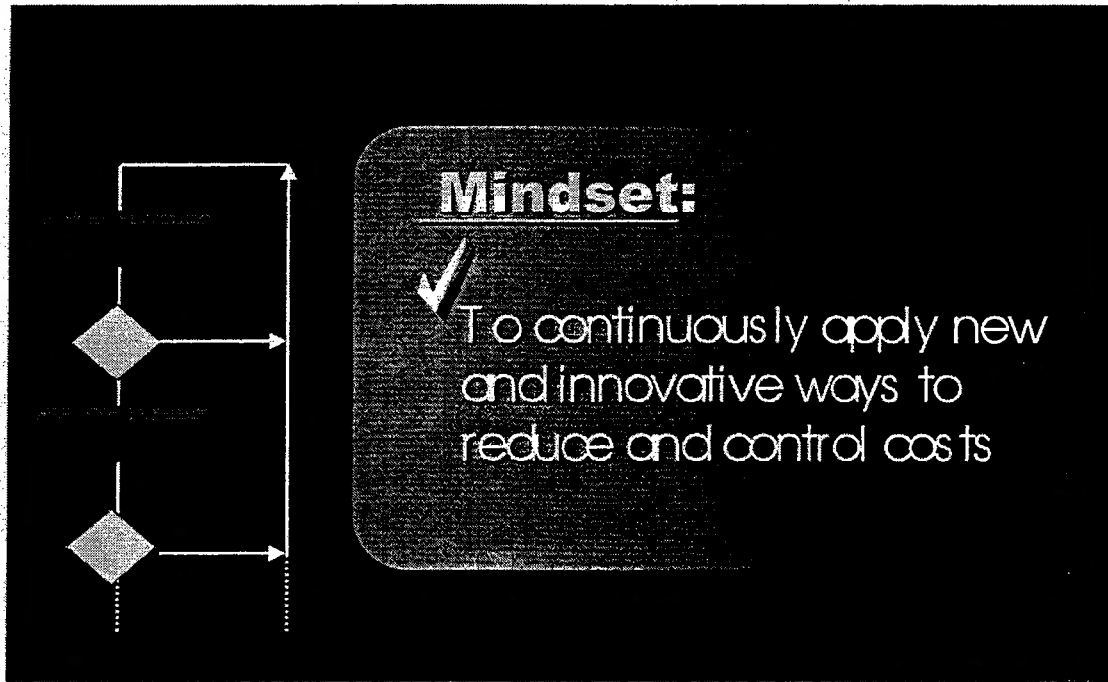

Content

- Introduction
- Design philosophy and guidelines
- Application in design and engineering
- Review meeting
- Conclusion

HOLDERBANK

Slide 3

Means to minimize CAPEX

Slide 4

Means to minimize CAPEX

Slide 5

Means to minimize CAPEX

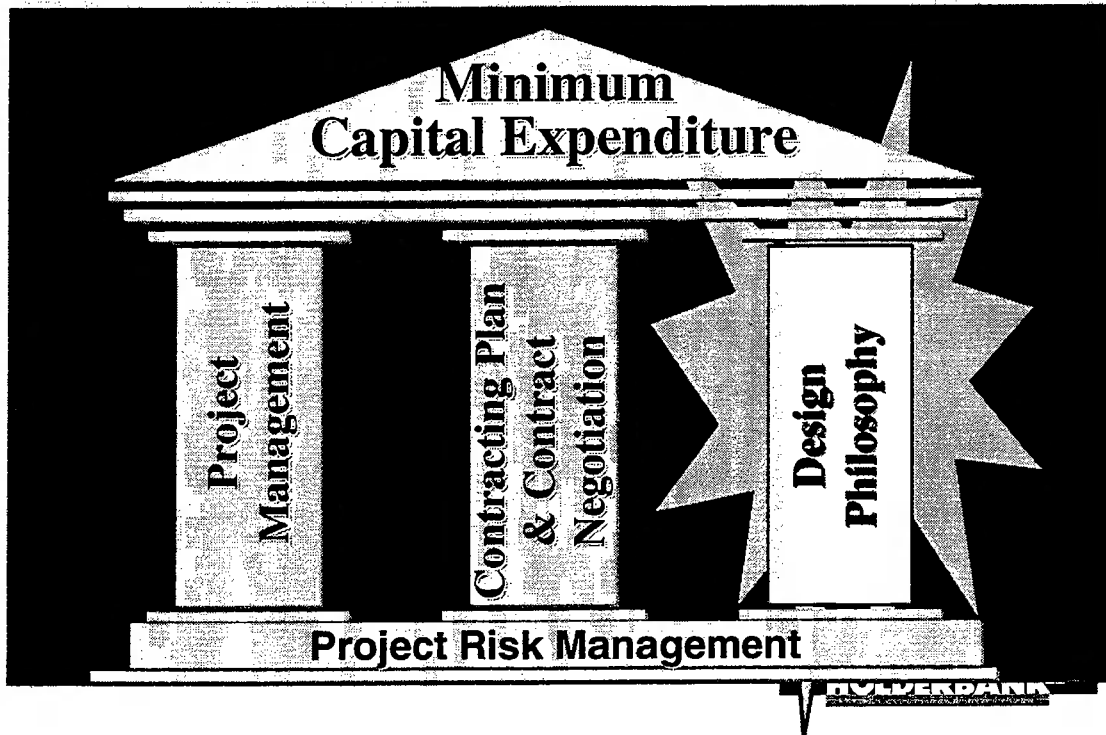

optimize investment :

- ❖ Is a design and engineering philosophy
- ❖ Is aiming at lowest initial investment at acceptable operating cost.

HOLDERBANK

Slide 6

Means to Minimize CAPEX

Slide 7

Design Philosophy

Design and Engineering:

- ❖ Determines investment
- ❖ Sets the degree of "operating comfort"
- ❖ Defines the borderline between

"HOLDARBANK"

Slide 8

Design Philosophy

Key Influencing Factors:

- ❖ Sizing and dimensioning of equipment, buildings and structures
- ❖ Arrangement of equipment
- ❖ Overall plant layout.

"HOLDERBANK"

Slide 9

Design Philosophy

Principles of Economic Design:

- ❖ Capacities of equipment within minimal practical limit
- ❖ Capacities of storages kept at minimum
- ❖ No standby equipment
- ❖ Step-wise project implementation
- ❖ No "nice to have", only "need to have"
- ❖ Buildings kept at minimum
- ❖ Value engineering
- ❖ Outsourcing
- ❖ Rent rather than buy
- ❖ (Use of second hand equipment)

HOLDERBANK

Slide 10

Design Philosophy

Plants built under the optimized **Investment Concept are:**

- ❖ **Efficient**
- ❖ **Highly Reliable**
- ❖ **With State-of-the-Art Technology**
- ❖ **With Advanced Emission Control Systems**
- ❖ **AND PRODUCE HIGH QUALITY PRODUCTS.**

HOLDERBANK

Slide 11

Design Philosophy

Economic Design means:

- ❖ Taking higher operational risks
- ❖ Accepting somewhat higher operating cost
- ❖ From "just in case" to "just in time"
 - ⇒ Need for preventive maintenance
 - ⇒ Need for better training of operating personnel
 - ⇒ Need for contingency procedures
- ❖ Expect more difficulties during start-up of new installation.

HOLDERBANK

Slide 12

Design Philosophy

Economic Design does NOT mean:

- ❖ Taking uncalculated operational risks
- ❖ Cheap equipment
- ❖ Compromise on safety
- ❖ Compromise on product quality
- ❖ Compromise on environmental performance.

HOLDERBANK

Slide 13

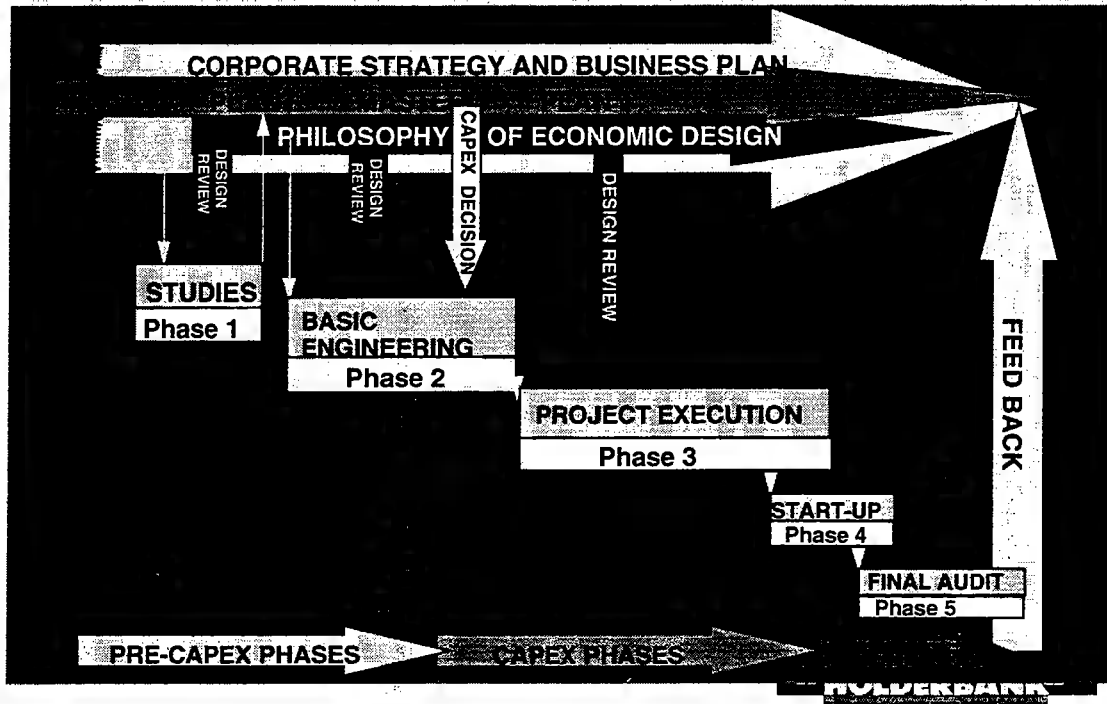

Application of Economic Design

- ❖ **Application in project concept and design from the beginning**
- ❖ **Design Reviews.**

HOLDERBANK

Slide 14

Slide 15

Checkpoint

To ensure, that minimum investment requirements are followed in every major investment.

Plans and specifications need to be critically reviewed!

**Project - Review
Meeting**

HOLDERBANK

Slide 16

- ❖ **Critical assessment of proposed concept and technical solutions in consideration of minimal investment aspects.**
- ❖ **Consideration of alternatives resulting in reduced investment cost**
- ❖ **Assessment of consequences and risks**
- ❖ **List actions and proposal for further consideration by the project responsables.**

HOLDERBANK

Slide 17

Ideal composition of team:

❖ "INSIDERS"

- Client (responsible for investment and future operations)
- Project team and specialists

❖ "OUTSIDERS"

- Experts with adequate knowledge of industry, but no knowledge about project.

HOLDERBANK

Slide 18

What:

- ❖ Presentation of project
General, Target, Market, Environment
- ❖ Detailed presentation of individual section
 - ~ Analyze for conformity with minimal investment targets
 - ~ Questioning of proposed concept
 - ~ Alternative proposals.

Who:

Client

Project Manager

Group

HOLDARBANK

Slide 19

<u>Action</u>	<u>Consequences</u>	<u>Risk</u>
5) No auxiliary furnace for raw mill, as expected use is less than 10% of time.	At feed moisture >9% over extended period (>3 days), nominal kiln output may not be maintained. <i>Saving: USD 170 k</i>	Minimal loss of production; < 1%
6) Kiln feed bin: delete stand-by dosing device. Provide only outlet with blind flange.	Kiln must be stopped when dosing device fails. <i>Saving: USD 18 k</i>	Acceptable, second dosing system can be added later.
7) Delete roof and OHT crane over raw mill.	hire mobile crane for maintenance on SE/BE; provide sufficient hard standing area. <i>Savings: USD 425 k</i>	Non availability of mobile crane on short notice may lead to kiln stoppage.

HOLDERBANK

Slide 20

Success Factors:

- ❖ **Structured approach to project engineering**
- ❖ **Commitment of all company levels, sharing of responsibility for decisions.**
- ❖ **Project Review with "outsiders"**
- ❖ **Inter-organizational learning**
- ❖ **Concept freeze after Project Review; discipline in project execution (danger of scope creep).**

HOLDERBANK

Slide 21

Concept of Optimized Investment Cost has proven to be a powerful tool in reducing assets for new installations

- ❖ It can successfully be applied to every project, provided:
- it is fully supported by management and all staff involved,
 - set targets are strictly adhered to during entire design and execution phase,
 - all personnel involved accepts strategy as a challenge which, when applied in an innovative, target oriented approach, will lead to cost effective solutions.

1

"HOLDERSBANK"

Procedures for Effective and Efficient Capital Expenditures

= Increase of fixed asset base
~ Investments in Property, Plant and Equipment

- | | |
|-------------------------------|--------------------|
| 1. Replacement | 4. Product Quality |
| 2. Rationalization | 5. Social & Safety |
| 3. Expansion, Diversification | 6. Environment |

&

F-Capex-00.ppt Kue/heu - 28.04.00

2

"HOLDERSBANK"

Impact of CAPEX on RONO

$$\text{Return On Net Operating Assets (↑) RONO} = \frac{\text{Net sales revenue (↑) - Cost (↓)}}{\text{Net Operating Assets (↓)}} = \frac{\text{EBIT}}{\text{NOA}}$$

$$= \frac{\text{Net sales revenue} - \{\dots\}}{\{\dots + \text{CAPEX} - \text{Depreciation}\}}$$

F-Capex-00.ppt Kuefheuer - 28.04.00

3

"HOLDBANK"

Impact of Asset Reduction on RONO

❖ Fixed assets value

❖ Fixed operating cost per year

⇒ interest (10%): 1.2 mio USD
 ⇒ depreciation (10 years): 1.2 mio USD

Impact of Asset Reduction on RONO

- ❖ Substantial impact of investment cost on RONO
- ❖ Investment cost are determined by ourselves
- ❖ Only one opportunity to influence investment cost

Cost reduction is imperative for each investment in property, plant and equipment

"HOLDBANK"

Project Organization

Project Phases

<u>Phase</u>	<u>Purpose</u>
<u>Study Phase</u>	Establishing the technical, economic, legal environmental impact and often also the political base for an investment decision for a well defined project
<u>Basic Engineering</u>	Completion of engineering work up to the point of placing orders (letter of intent) with the main equipment supplier
<u>Detailed Engineering/</u> <u>Project Execution</u>	Complete all detailed engineering, procurement and construction. Implement an overall project monitoring and control system for quick identification of problems and deviations from set targets and to enable fast and adequate corrective actions (schedule) (-> quality control).

"HOLDBANK"

Project Organization

Project Phases

<u>Phase</u>	<u>Purpose</u>
<u>cont.</u>	Establish at an early date adequate organization and personnel structure to operate and maintain the plant/facilities. Assure raw materials supplies and utilities for start-up and normal operation.
<u>Start-up/ Commissioning</u>	Ensure that complete installations function properly and continuously under load. Ensure that contractual obligations by suppliers are met and full rated output is achieved on provisional taking-over of plant.
<u>Final Audit</u>	Evaluation of results achieved and recording the experience gained in the first year of operation.

“HOLDBANK”

Summary and Conclusion

Successful Project Implementation and Minimization of CAPEX:

- Projects embedded in company strategy
(→ Plant Masterplan!)
- Proper project organization : → Phases of CAPEX projects
→ Project team
- Proper performance of standard project management activities and application of adequate project management tools
- Appropriate contracting strategy and effective negotiation
